Mandriva 2011 beta1 errata

Eugeni Dodonov on Mandriva Blog:

Hi all,

shortly after the release of 2011 beta1, we have discovered that the 32bit version was unable to boot in some cases (as it was pointed out at https://qa.mandriva.com/show_bug.cgi?id=62792). To solve this issue, we decided to provide additional set of images with the errata to this issue, which should be available on mirrors shortly.

Mandriva Blog entry:
