

Photo of the Day 1.0 beta for Mandriva 2009.1

A plasmoid that displays photo of the day from various websites

Home Page: <http://kde-look.org/content/show.php/Photo+of+the+Day?content=104631>

License: LGPL

Where is?:

This new Plasma Applet is inside MIB KDE-4.3.1 /noarch repository:

http://mib.pianetalinux.org/mib/forum/index.php?f=13&t=1170&rb_v=viewtopic

Description:

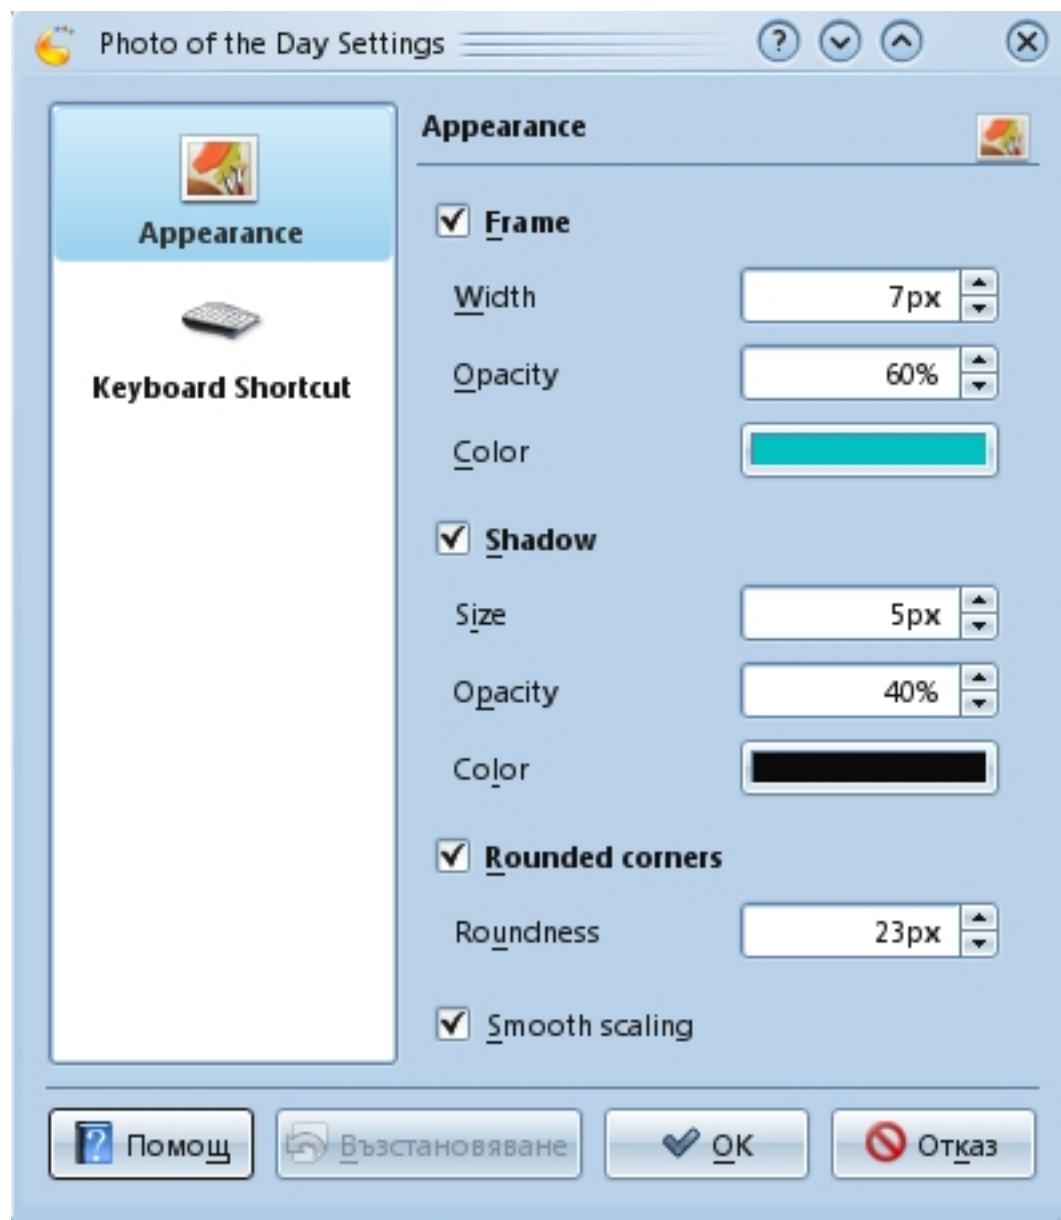

A plasmoid that displays photo of the day from various websites
for example: displays photo of the day from National Geographic website

Changelog:

Version 1.0 beta

- Full rework of applet painting
- Now applet uses data engines to receive photos. Applet - data engine communication is through standart Plasma API function, so I think it is possible a data engine to be written in any supported by Plasma language. (If someone is interested, please send me a e-mail or write a comment)
- Error messages are drawn as part of image and disappear in 10 seconds.
- Customizable check for new photo interval.

Screenshots:

Marrakech Market at Night

Photograph by Ben Carron

Featuring snake charmers, acrobats, storytellers, and open-air food stalls, nightfall at the Djemma el-fna in Marrakech attracts crowds of foreigners and jovial locals alike.
