

Shotwell 0.3.2 per Mandriva Linux 2010.0 & 2009.1

Open source photo organizer

Description:

Shotwell is a digital photo organizer designed for the GNOME desktop environment. It allows you to import photos from disk or camera, organize them in various ways, view them in full-window or fullscreen mode, and export them to share with others.

Homepage:

<http://www.yorba.org/shotwell/>

Features:

- * import photos from any digital camera supported by gPhoto
- * automatically organize events containing photos taken at the same time
- * non-destructive editing allows altering photos without ruining originals or using disk space for each copy
- * one-click auto-enhancement
- * rotate, mirror, and crop photos
- * reduce red-eye and adjust the exposure, saturation, tint, and temperature of your photos
- * export photos as they are or by specifying dimensions and JPEG quality to reduce size
- * edit any photo, even if it's not imported to the Shotwell library

We plan to implement more features soon, including exporting to Facebook and Flickr and slideshows with customizable music and transitions.
