

Minitube 0.9 for Mandriva Linux 2010.0 & 2009.1

Minitube is a native YouTube client.

With it you can watch YouTube videos in a new way: you type a keyword, Minitube gives you an endless video stream. Minitube does not require the Flash Player.

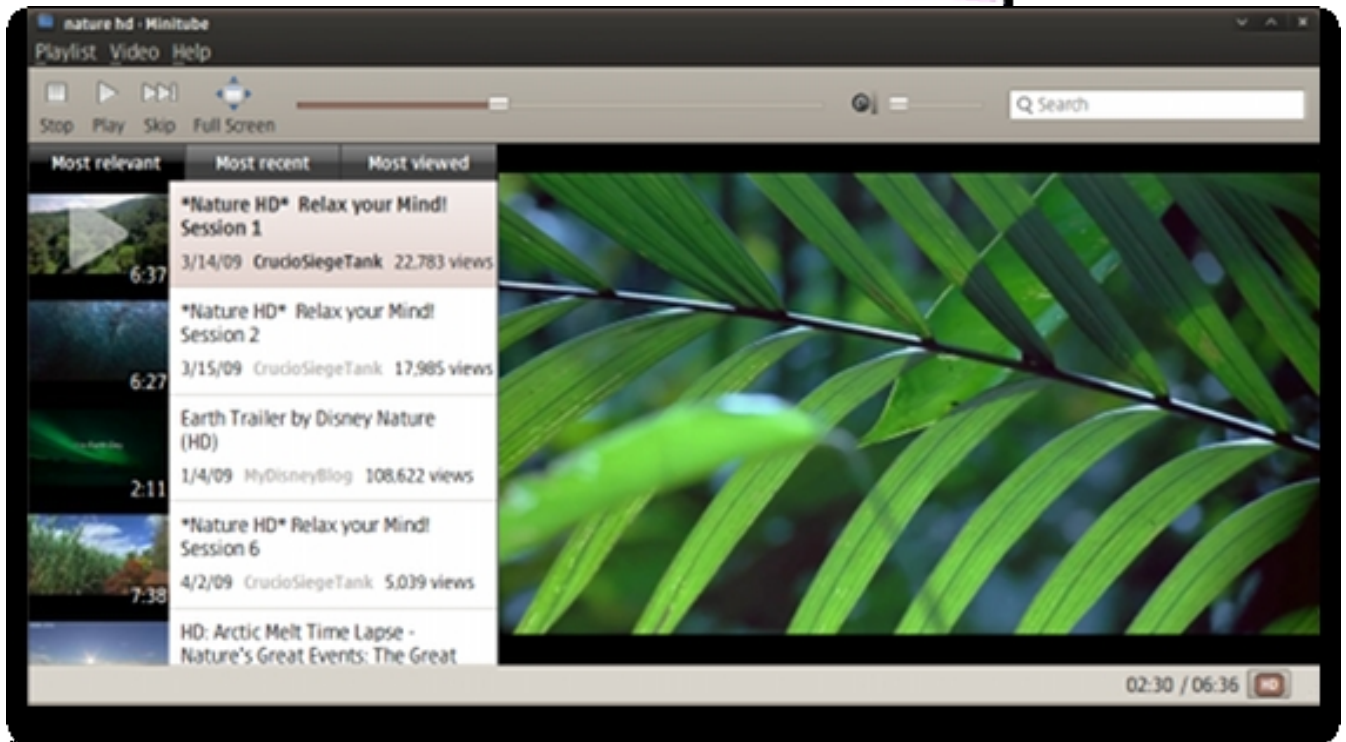

Minitube is not about cloning the original Youtube web interface, it strives to create a new TV-like experience.

Minitube is in its early stages. It lacks many features I planned for it. That said, it works. Try it, report your experience in the comments and spread the word.
