

### K Birthday Reminder 0.9.73 for Mandriva Linux 2009.1 & 2010.0

Plasmoid reminds you of birthdays and anniversaries of contacts<sup>[1]</sup> in the (standard) KDE address book.

Inspired by the KDE3 kicker applet KBirthday from Jan Hambrecht.

As the version number indicates, the plasmoid isn't quite ready yet. Also there are a few issues I know of.

The popup displayed when clicking on the plasmoid's icon is supposed to show only when living in a panel. This popup dialog is not ready yet! In the spirit of 'release early, release often' this is the CeBit release. Hope you will enjoy it.

<sup>[1]</sup> *Contacts can be added using KAddressBook or Kontact.*
