simon

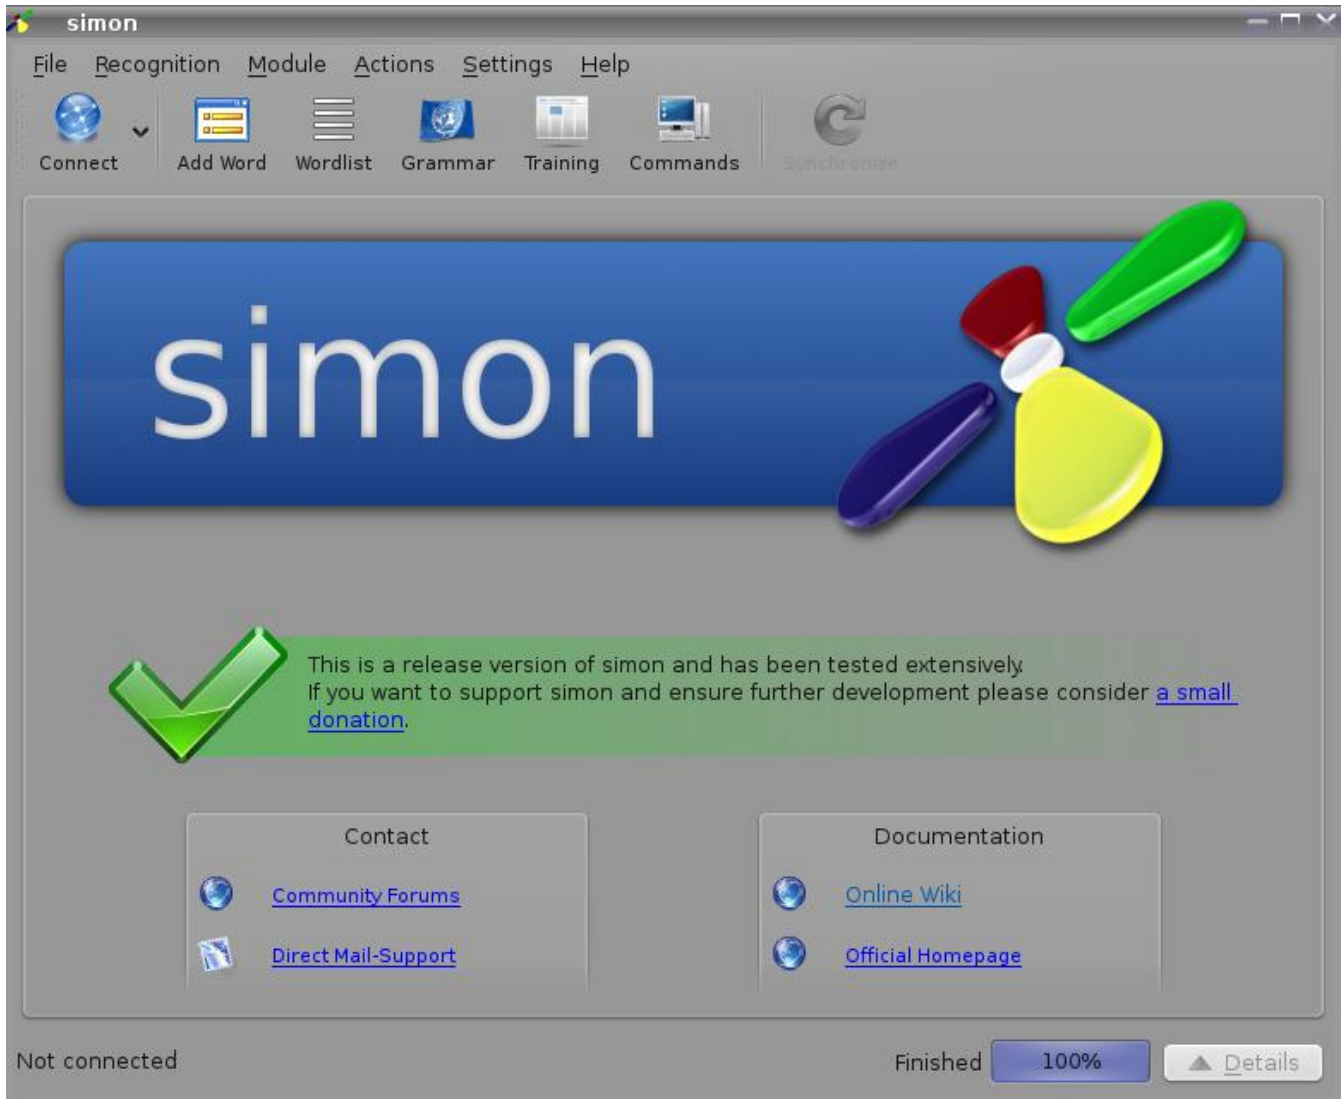

- * ... is an open-source speech recognition program and replaces the mouse and keyboard.
- * ... is designed to be very flexible and allows customization for any application where speech recognition is needed.
- * ... is a potential European project of "e-inclusion" because of the language-independent programming.
- * ... is in development for physically disabled people to give them the possibility to chat, to write e-mails, to surf the internet, to do internet-banking and much more.

simon

- * ... è un software di riconoscimento di lingua open source e sostituisce il mouse e la tastiera.
- * ... viene creato in modo molto flessibile e permette così fabbricazioni speciali per qualsiasi uso del riconoscimento di lingua.
- * ... a causa della programmazione di base che è indipendente di lingua, Simon è un progetto europeo con potenziale dell' „e- Inklusion“.
- * ... è in sviluppo per dare a persone handicappate la possibilità di usare il chat, il e-mail, navigazione in internet, netbanking ecc.

The screenshot shows the Simon 0.3 application window. The title bar reads "simon". The menu bar includes "File", "Recognition", "Module", "Commands", "Actions", "Settings", and "Help". The toolbar contains icons for "Connect", "Add Word", "Wordlist", "Grammar", "Training", "Commands", "Synchronize", "SSC", and "Manage scenarios". The main window has two tabs: "Welcome" and "Wordlist". The "Wordlist" tab is active, showing a table of words under the "Active Vocabulary" section. The table has columns for "Word", "Pronunciation", "Category", and "Recognition Rate". The word "Bub" is selected. To the right, the "Train Words" section shows "Bub (NOM)" and several buttons: "Build sentences", "Add to Training", "Remove Word from Training", and "Train selected Words". At the bottom, the status bar shows "Not connected" on the left and "Finished 100%" on the right, with a "Details" button.
