

MiniTUBE 1.8 for Mandriva 2010.2 & Rosa2012lts.

Minitube is a native YouTube client. With it you can watch YouTube videos in a new way: you type a keyword, Minitube gives you an endless video stream.

Minitube does not require the *Flash Player*.

Minitube is not about cloning the original Youtube web interface, it strives to create a new TV-like experience.

Minitube is in its early stages. It lacks many features I planned for it. That said, it works.

Try it, report your experience in the comments and spread the word.

- **Progs:**
- minitube-1.8-69mib

What's new?

- Enhanced Compact Mode: window on top, can be made smaller and remembers its own position
- Adaptive video title font size
- Unity & GNOME 3 actions (aka Quicklists)
- Mac Sandbox support
- Added missing menu item to restore hidden window, as per the OS X HIG
 - More responsive UI while loading videos on the Mac
- Selecting a recent keyword now also sets the searchbox text
- Selecting a suggestion now also sets the searchbox text on the Mac
- Fixed duplicate channel names in suggestions popup
- Fixed playback not starting or being interrupted on Linux
- Fixed search box being erroneously focused on the Mac
- Fixed wrong localization of some menu items on the Mac
- New and updated translations
