

MiniTube 1.9 for Mandriva 2010.2, Rosa2012lts. & Rosa 2012.1.

Minitube is a native YouTube client. With it you can watch YouTube videos in a new way: you type a keyword, Minitube gives you an endless video stream.

Minitube does not require the *Flash Player*.

Minitube is not about cloning the original Youtube web interface, it strives to create a new TV-like experience.

Minitube is in its early stages. It lacks many features I planned for it. That said, it works.

Try it, report your experience in the comments and spread the word.

- Progs:
- minitube-1.9-69mib

What's new?

- Adapted to YouTube changes
- New search filter UI. Filter results by publication date, video duration and video quality.
- Sort by rating
- Search spell suggestions: "Did you mean..."
- New downloads are now added at the top of the list
- Video definition indicator while downloading videos
- Simple integration with Buffer ap
- Better fullscreen experience on the Mac: sidebar shows when the mouse hits the left side, mouse and playlist autohide
- Compatible with OS X Mountain Lion Gatekeeper
- Partial Retina Display support. Still using 1x bitmaps because of Qt not being ready
- OS X Mountain Lion notifications when a download finishes
- Fixed flickering in fullscreen controls on Linux, also playlist and toolbar now autohide
- New and updated translations. Thanks to all the translators involved!
