

È disponibile un nuovo kernel 2.6.29.4 quarto rilascio da <http://www.kernel.org/>

Ricordo che questo kernel è usabile con attenzione ma che manca di tutte le patch e moduli 3rdparty tipiche dei kernel Mandriva non essendo quello ufficiale di Mandriva.

powerpc/5200: Don't specify IRQF\_SHARED in PSC UART driver

commit d9f0c5f9bc74f16d0ea0f6c518b209e48783a796 upstream.

The MPC5200 PSC device is wired up to a dedicated interrupt line which is never shared. This patch removes the IRQF\_SHARED flag from the request\_irq() call which eliminates the "IRQF\_DISABLED is not guaranteed on shared IRQs" warning message from the console output.

commit 808e98b3d87427919bb0236d79ad827d6d1ff40f

ehea: fix invalid pointer access

commit 0b2febf38a33d7c40fb7bb4a58c113a1fa33c412 upstream.

This patch fixes an invalid pointer access in case the receive queue holds no pointer to the next skb when the queue is empty.

commit d60c0932c0c995c0076b2edc8b83df7ae71861fa

ocfs2: fix i\_mutex locking in ocfs2\_splice\_to\_file()

commit 328eaaba4e41a04c1dc4679d65bea3fee4349d86 upstream.

Rearrange locking of i\_mutex on destination and call to ocfs2\_rw\_lock() so locks are only held while buffers are copied with the pipe\_to\_file() actor, and not while waiting for more data on the pipe.

Potete scaricarlo da [qui](#), al solito tasto destro salva destinazione con nome.

Ecco il [log](#) dei fix.

ciao.

grissino.
