

**Exaile 0.2.14 Complete** per Mandriva Linux 2009.1

Exaile is a music manager and player for GTK+ written in Python.

Unfortunately the 0.3.0 version in Mandriva is an alfa version and not contains all plugins to enjoy of this fantastic program.

In this complete edition exaile contains:

Rapid access via X server and Globals Rapid Access via Gnome

Adding directories to your own playlists.

Tray Buttons in the notification area: Play/Pause, Next, Previous

Show the covers album in the Desktop

Share music via DAAP, like in Banshee

Libnotify when begins a new song

Support to massive storage and ipods

Http control of Exaile

Support of current song with Pidgin

Icecast/Shoutcast emisor

Support to Bluetooth

Support with MI: Gaim, Gajim, Gossip and Pidgin

Mini Mode Option

Support with MTP device manager

LastFM radio via proxy (beta version)

Radio Shoutcast

Information about your group via wikipedia, and lyric songs, too

Record fluxes via Streamripper

Support of a Graphic Equalizer.

Support with Avant Window Navigator

You can update the plugins, too.

Download covers from Amazon

## Sorgenti:

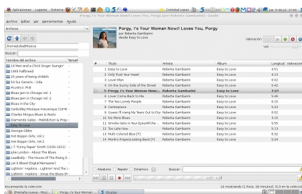

[http://www.exaile.org/files/exaile\\_0.2.14.tar.gz](http://www.exaile.org/files/exaile_0.2.14.tar.gz)

This package has been made with a fedora spec file and with myself using the Exaile program in my Ubuntu, for these two reason i've been able adding the necessary dependencies to activate all plugins of Exaile.

If you have installed Exaile 0.3.0 you must uninstall this version and then install Exaile 0.2.14 version of MIB repository.

I wait you enjoy with this version friend ;-)
