

È disponibile un nuovo kernel 2.6.30-rc8 ottavo rilascio da <http://www.kernel.org/>

Ricordo che questo kernel è usabile con attenzione ma che manca di tutte le patch e moduli 3rdparty tipiche dei kernel Mandriva non essendo quello ufficiale di Mandriva.

Merge branch 'merge' of git://git.kernel.org/pub/scm/linux/kernel/git/benh/powerpc

\* 'merge' of git://git.kernel.org/pub/scm/linux/kernel/git/benh/powerpc:  
powerpc/pmac: Update PowerMac 32-bit defconfig

commit 05ad709d04799125ed85dd816fdb558258102172

parport: quickfix the proc registration bug

Ideally we should have a directory of drivers and a link to the 'active' driver. For now just show the first device which is effectively the existing semantics without a warning.

This is an update on the original buggy patch that I then forgot to resubmit. Confusingly it was proposed by Red Hat, written by Etched Pixels fixed and submitted by Intel ...

commit d3ae33efb8e2f277f9007eb060c9d0b91ab38ae1

pata\_netcell: LBA48 force identify bits correct

This matches Bartlomiej's patch for ide\_pci\_generic:  
c339dfdd65b52bfd947ab29d1210314a2f6d622d

In the libata case netcell has its own mini driver. I suspect this fix is actually only needed for some firmware revs but it does no harm either way.

commit ca55bd7e2905d344bf697f7c2cc347cb42999e7a  
Merge: 4157fd8 12186be

Merge git://git.kernel.org/pub/scm/linux/kernel/git/davem/net-2.6

\* git://git.kernel.org/pub/scm/linux/kernel/git/davem/net-2.6:  
net\_cls: fix unconfigured struct tcf\_proto keeps chaining and avoid kernel panic when we use cls\_cgroup  
e1000: add missing length check to e1000 receive routine  
forcedeth: add phy\_power\_down parameter, leave phy powered up by default (v2)  
Bluetooth: Remove useless flush\_work() causing lockdep warnings

Potete scaricarlo da [qui](#), al solito tasto destro salva destinazione con nome.

Ecco il [log](#) dei fix.

ciao.

grissino.
