

## DrakLive 0.9-3

With this working version you can build your iso!

This clean version now uses only mdv repository and not plf & MIB.  
It's similar to the tool we used, with some modifications, to prepare our ISOs.

MIB fixed several errors not allowing official DrakLive to finalize ISO projects.

The ISO file will be compatible with [MIB LiveToFlash](#) , so you can run it on USB Flash, even with a persistent root and home partition, and an extra partition for data exchange.

For instructions, you can follow web resources available for official Mandriva DrakLive ( [Wiki](#) , [Forum](#) ).

---

**Mandriva 2010.2 32 & 64bit**
